

1. Install WAMP

- Download and install WampServer 2.5 from the official site or trusted archive
- During installation, make sure it installs to C:\wamp

2. Install MongoDB

- Install MongoDB Shell v4.0.11

3. Install MongoDB Compass

- Install MongoDB Compass v1.46.2 for GUI-based database browsing

4. Install Node.js

- Download and install Node.js v6.17.1
- Confirm installation via command prompt:

node -v

npm -v

5. Install Composer

- Download and install Composer from <https://getcomposer.org>
- Verify installation:

composer -v

6. Enable PHP MongoDB Extension in WAMP

- Download the following DLL: `php_mongo-1.6.14-5.5-ts-vc11-x64.dll`
- Paste it into the following directory: `C:\wamp\bin\php\php5.5.12\ext`
- Open `php.ini` located in: `C:\wamp\bin\php\php5.5.12\php.ini`
- Add the following line at the end of the file:

`extension=php_mongo.dll`
